A veterinarian finds that when a lab animal specimen is exposed to a new pesticide, the growth of a tumor in the specimen can be modeled by

$$f(t) = 2.1e^{0.2t}$$
 $t > 0$

where t is the number of days since exposure to the pesticide and f(t) represents the diameter of the tumor in mm.

- 11. Determine f'(t)
- 12. Evaluate and interpret f'(3)

The derivative of a general exponential function in the form

$$f(x) = b^x$$

where b > 0 and $b \neq 1$ is

$$f'(x) = b^x \cdot \ln(b)$$

Use this to find the derivatives of the following functions.

13.
$$f(x) = 2^x$$

14.
$$g(x) = (\frac{1}{3})^x$$

15.
$$y = 10^x$$
